

Project Presentation Dossier: "L'Odyssée Express"

Green Hackathon for Ecological Transition and Youth Innovation

Event Date: Saturday, July 4, 2026

Location: Yaoundé, Cameroon (Hosting currently under validation with the Institut Français du Cameroun - IFC)

Project Leader:

Gedeon Sylvestre Tchuisseu

Engineering Student at the École Polytechnique de Bruxelles (ULB)

Student ID: 565736

Contact: +32 465 33 94 48 | gedeon.sylvestre.tchuisseu@ulb.be

1. Executive Summary

"L'Odyssée Express" is a co-development Green Hackathon with a high environmental and social impact. Inspired by the engineering and eco-design expertise developed at ULB (notably through the CIVIS Alliance Sustainability Challenge), this project aims to mobilize Cameroonian youth around the challenges of ecological transition, urban resilience, and the circular economy.

2. Objectives and Strategic Axes

The project directly aligns with the sustainability priorities of both ULB and the European Union:

- **Green Deal and Circular Economy:** Developing local technical solutions for resource recovery and waste management in Yaoundé.
- **Youth and Employment:** Strengthening the technological and entrepreneurial skills of young people in urban areas.
- **Diaspora for Development:** Actualizing the role of international students in Europe as vectors for knowledge and skills transfer to their countries of origin.
- **Alternative to Irregular Migration:** Demonstrating through action that local innovation creates opportunities for socio-economic success at home.

3. Operational Progress

With 5 weeks remaining before the event, the operational foundations are firmly established:

- **Infrastructure:** A prestigious partnership is under validation with the Institut Français du Cameroun (IFC) in Yaoundé to host the event in the city center.
- **Human Resources:** A mentorship network is already secured, composed of local engineering students to guide the participants.
- **Educational Engineering:** A hackathon methodology focused on eco-design and the viability of local economic models.

4. Logistics & Travel Requirements

To ensure the direct supervision and successful execution of the hackathon on-site, a project delegation of **two (2) adults** will travel from Brussels to Yaoundé. The logistical flight requirements have been finalized as follows:

- **Departure (Brussels to Yaoundé):** Monday, June 17, 2026
- **Return (Yaoundé to Brussels):** Sunday, July 5, 2026
- **Delegation Size:** 2 Passengers (Round-trip)

5. Financing Plan and Urgent Needs

To finalize the launch and guarantee the success of the initiative, the required seed budget is **€2,000** (excluding the requested airline sponsorship/logistical support), distributed as follows:

Expense Item	Description	Estimated Amount
Direct Logistics	Venue setup, connectivity, technical support, and supplies for the teams.	€900
Emulation Grants	Support prizes and micro-funding to reward and launch the 3 most viable innovation projects.	€800
Communication & Catering	Catering for participants/mentors and documentation of the event.	€300
TOTAL REQUIRED	Urgent financing need (On-site operational costs)	€2,000

6. Request for Institutional & Airline Support

As part of this corporate and academic outreach, we are seeking partnerships for:

1. **Airline/Logistical Sponsorship:** Provision of 2 round-trip tickets (BRU - NSI) or access to a preferred "Academic/NGO" tariff structure for the travel window of June 17 to July 5, 2026.
2. **Institutional Guidance:** Connections with corporate foundations, diaspora funds, or European-African cooperation networks sensitive to youth-led sustainable development.

Available immediately for a short presentation of this dossier on the Solbosch campus or via videoconference according to your availability.
